

Title: To conduct experiments to evaluate the workability and strength of self-compacting concrete.

Overview: The test was carried out in the Structural engineering laboratory at the **Department of Civil Engineering, IIT Kharagpur, India**. All the experiments were conducted in February 2024 by **Kumar Anjneya**, a research scholar in the Department of Civil Engineering, under the guidance of **Prof. Arghya Deb**.

Objective: To study the role of particle morphology on the rheology and strength of self-compacting fresh concrete

Tests conducted: Sieve analysis, Tests for material characterization of cement, sand and coarse aggregate, Slump test, V-funnel test (& T5 measurement for segregation potential), J-ring, Compression test

1. Material Characterization

1.1 Coarse aggregate

Rounded particles

Table 1: Flakiness and Elongation index of rounded particles

Sieve sizes	Flakiness Index		Elongation Index	
	Sample wt. (g)	wt. of aggregate passing (g)	Sample wt. (g)	wt. of aggregate retained (g)
25-20	3128.5	483.5	2645.0	97
20-16	2506.5	404.5	2102	184
16-12.5	1258.5	32	1226.5	122.5
12.5-10	569	43	526	9
10-6.3	167.5	20	147.5	17
Total wt. (g)	7630	983	6647	429.5
	Flakiness Index		Elongation Index	
	12.88		6.46	
(Flakiness Index + Elongation Index) < 40% {conforming to IS 383, 2016, Clause 5.3}				
IS: 2386, Part I				

Table 2: Specific gravity of Coarse aggregate (Rounded)

Sl. no.	Specifications	Weight (g)
1	Wt. of sample taken	1000
2	Wt. of vessel + sample + water (A)	4506
3	Wt. of vessel + water (B)	4046.5
4	Wt. of saturated and surface dry aggregate (C)	768.5
5	Wt. of oven dry sample (D)	758
6	Specific gravity	2.45
7	Apparent specific gravity	2.54
8	Water absorption, % dry wt.	1.39
IS: 2386 (PART III)		

Angular particles

Table 3: Flakiness and Elongation index of angular particles

Seive sizes	Flakiness Index		Elongation Index	
	Sample wt. (g)	wt. of aggregate passing (g)	Sample wt. (g)	wt. of aggregate retained (g)
20-16	2090.5	381	1709.5	124.5
16-12.5	1266	70.5	1195.5	177.5
12.5-10	875	106.5	768.5	30.5
10-6.3	201.5	50	151.5	21.5
Total wt. (g)	4433	608	3825	354
	Flakiness Index		Elongation Index	
	13.72		9.25	
(Flakiness Index + Elongation Index) < 40% {Conforming to IS 383, 2016, Clause 5.3}				
IS: 2386, Part I				

Table 4: Specific gravity of Coarse aggregate (Angular)

Sl. no.	Specifications	Weight (g)
1	Wt. of sample taken	1000
2	Wt. of vessel + sample + water (A)	4677
3	Wt. of vessel + water (B)	4046.5
4	Wt. of saturated and surface dry aggregate (C)	980
5	Wt. of oven dry sample (D)	965
6	Specific gravity	2.76
7	Apparent specific gravity	2.88
8	Water absorption, % dry wt.	1.55
IS: 2386 (PART III)		

Table 5: Angularity of aggregates (Angular and Rounded)

Sl. no.	Specifications	Weight (g)	
		Angular	Rounded
1	Wt. of cylinder + sample + water (A)	7120.7	7173
2	Wt. of cylinder + water (B)	5555.5	5555.5
3	Wt. of cylinder (C)	2768.5	2768.5
4	Specific gravity	2.76	2.45
5	Angularity number	10.42	2.49
IS: 2386, Part I			

Coarse aggregate gradation

Table 6: Proportions of coarse aggregate ($D_{max} = 20\text{mm}$)

Sieve sizes	Total wt. of sample taken (kg)	45.95		
	Wt. of the sample retained (kg)	% retained	% Cumulative retained	% Passing
20	0.00	0.00	0.00	100.00
16	9.46	20.59	20.59	79.41
12.5	9.31	20.26	40.85	59.15
10	7.48	16.28	57.13	42.87
6.3	13.07	28.45	85.58	14.42
4.75	6.62	14.42	100.0	0.0

Table 7: Proportions of coarse aggregate ($D_{max} = 16\text{mm}$)

Sieve sizes	Total wt. of sample taken(kg)	45.95		
	Wt. of the sample retained (kg)	% retained	% Cumulative retained	% Passing
16	0.00	0.00	0.00	100.00
12.5	11.72	25.51	25.51	74.49
10	9.42	20.50	46.01	53.99
6.3	16.46	35.83	81.84	18.16
4.75	8.34	18.16	100.00	0.00

1.2 Fine aggregate

Fine aggregate gradation

Table 8: Sieve analysis of sand

Sieve sizes	Total wt. of sample taken	1000 g		
	Wt. of the sample retained (g)	% retained	% Cumulative retained	% Passing
4.75 mm	53	5.3	5.3	94.7
2.36 mm	32	3.2	8.5	91.5
1.18 mm	113	11.3	19.8	80.2
600 micron	361	36.1	55.9	44.1
300 micron	359	35.9	91.8	8.2
150 micron	65.5	6.55	98.35	1.65
Pan	16.5	1.65	100	0
Zone II, Confirming to IS 383, 2016, Clause 6.3				
		Fineness modulus	2.7965	

Figure 4: Particle size distribution for fine aggregate

Specific gravity of sand

Table 9: Specific gravity of fine aggregate

Sl. no.	Specifications	Weight (g)
1	Wt. of sample taken	1000
2	Wt. of saturated and surface dry aggregate (C)	500
3	Wt. of pycnometer + sample + water (A)	1824.5
4	Wt. of pycnometer + water (B)	1513.5
5	Wt. of oven dry sample (D)	494
6	Specific gravity	2.61
7	Apparent specific gravity	2.70
8	Water absorption, % dry wt.	1.21
IS: 2386 (PART III)		

1.3 Cement

Cement: Composite cement 53 grade conforming to IS:455-1989

Initial setting time: (Vicat's apparatus): 48 minutes

Specific surface area

Table 10: Blaine's air permeability test

Sl. No.	Time (s)	Specific surface area (cm ² /g)
1	52.53	3087.55
2	52.38	3083.13
3	52.48	3086.08
	Mean	3085.58

Specific gravity of cement

Table 11: Specific gravity of cement

Sl. no.	Specifications	Weight (g)
1	Wt. of flask, W1	108.1
2	Wt. of flask + cement, W2	163.53
3	Wt. of flask + cement + kerosene, W3	358.55
4	Wt. of flask + kerosene, W4	325
5	Wt. of flask + water, W5	380.77
6	Specific gravity of kerosene	0.795
7	Specific gravity of cement	3.185
IS: 2720 (PART III)		

1.4 Admixture

A Polycarboxylate-based admixture (PCE) was used to improve the workability of the fresh concrete.

2. Mix design

Table 12: Mix Proportioning (kg/m³)

Mix	Aggregate	Sand	Cement	Water	Admixture (% of binder)	w/c
I	919	1000	400	200	0.68	0.5

3. Samples

Table 13: Samples for testing

Sl. No.	Designation	Particle shape	Max. aggregate size (D _{max}), mm
I	EXP-A-20	Angular	20
II	EXP-A-16	Angular	16
III	EXP-R-20	Rounded	20
IV	EXP-R-16	Rounded	16

4. Test results

Table 14: Experimental results for fresh concrete samples

Sl. No.	Designation	Slump Flow (mm)	J-ring (mm)	T500 (sec)	V-funnel (sec)	T5 (sec)
I	EXP-A-20	580	515	2.9	11.12	14.35
II	EXP-A-16	560	509	3.2	14.07	16.26
III	EXP-R-20	610	570	2.3	10.21	22.3
IV	EXP-R-16	588	553	2.6	11.01	17.16

T500: time at 500 mm flow, T5: time to flow out of V-funnel after 5 mins of standing

Table 15: Compressive strength for fresh concrete samples

Sl. No.	Designation	Compressive strength (MPa)
		at 28 days
I	EXP-A-20	26
II	EXP-A-16	30
III	EXP-R-20	24.87
IV	EXP-R-16	26.7

Figure 5: Slump flow for angular particles concrete samples

Figure 6: Slump flow for rounded particles concrete samples

Figure 7: J-ring test for angular and rounded particles concrete

Figure 8: Segregation in angular sample with $D_{\max} = 25$ mm

Figure 9: Cracked surface for angular and granular specimen

Figure 10: Crack pattern for EXP-A-16

Conclusion:

Flow was higher in rounded aggregates compared to angular particles. Again, flow increased with an increase in D_{max} . However, with higher $D_{max} > 25$ mm, segregation was noticed with the mentioned mix design.

Acknowledgement:

We want to acknowledge Mr. Prasanta Kumar Dey, Senior Technical Superintendent, Technical Superintendents: Mr. Avijit Karak, Mr. Shyamal Saha, Mr. Vinod Kr. Sharma, staff members: Mr. Subandhu Pradhan and others for their cooperation and support in conducting all the experiments.
